

# Protection, Gender and Inclusion Community Engagement and Accountability

**Asia Pacific Surge Training:  
Emergency WASH**

21 November 2022

# Learning objectives

- **To have a common understanding of importance** of PGI and CEA within WASH
- **To feel confident to articulate** the reasons that we should implement PGI and CEA programming approaches, including practical ways to achieve it

# Have a look at this development intervention

(source: UNDP)

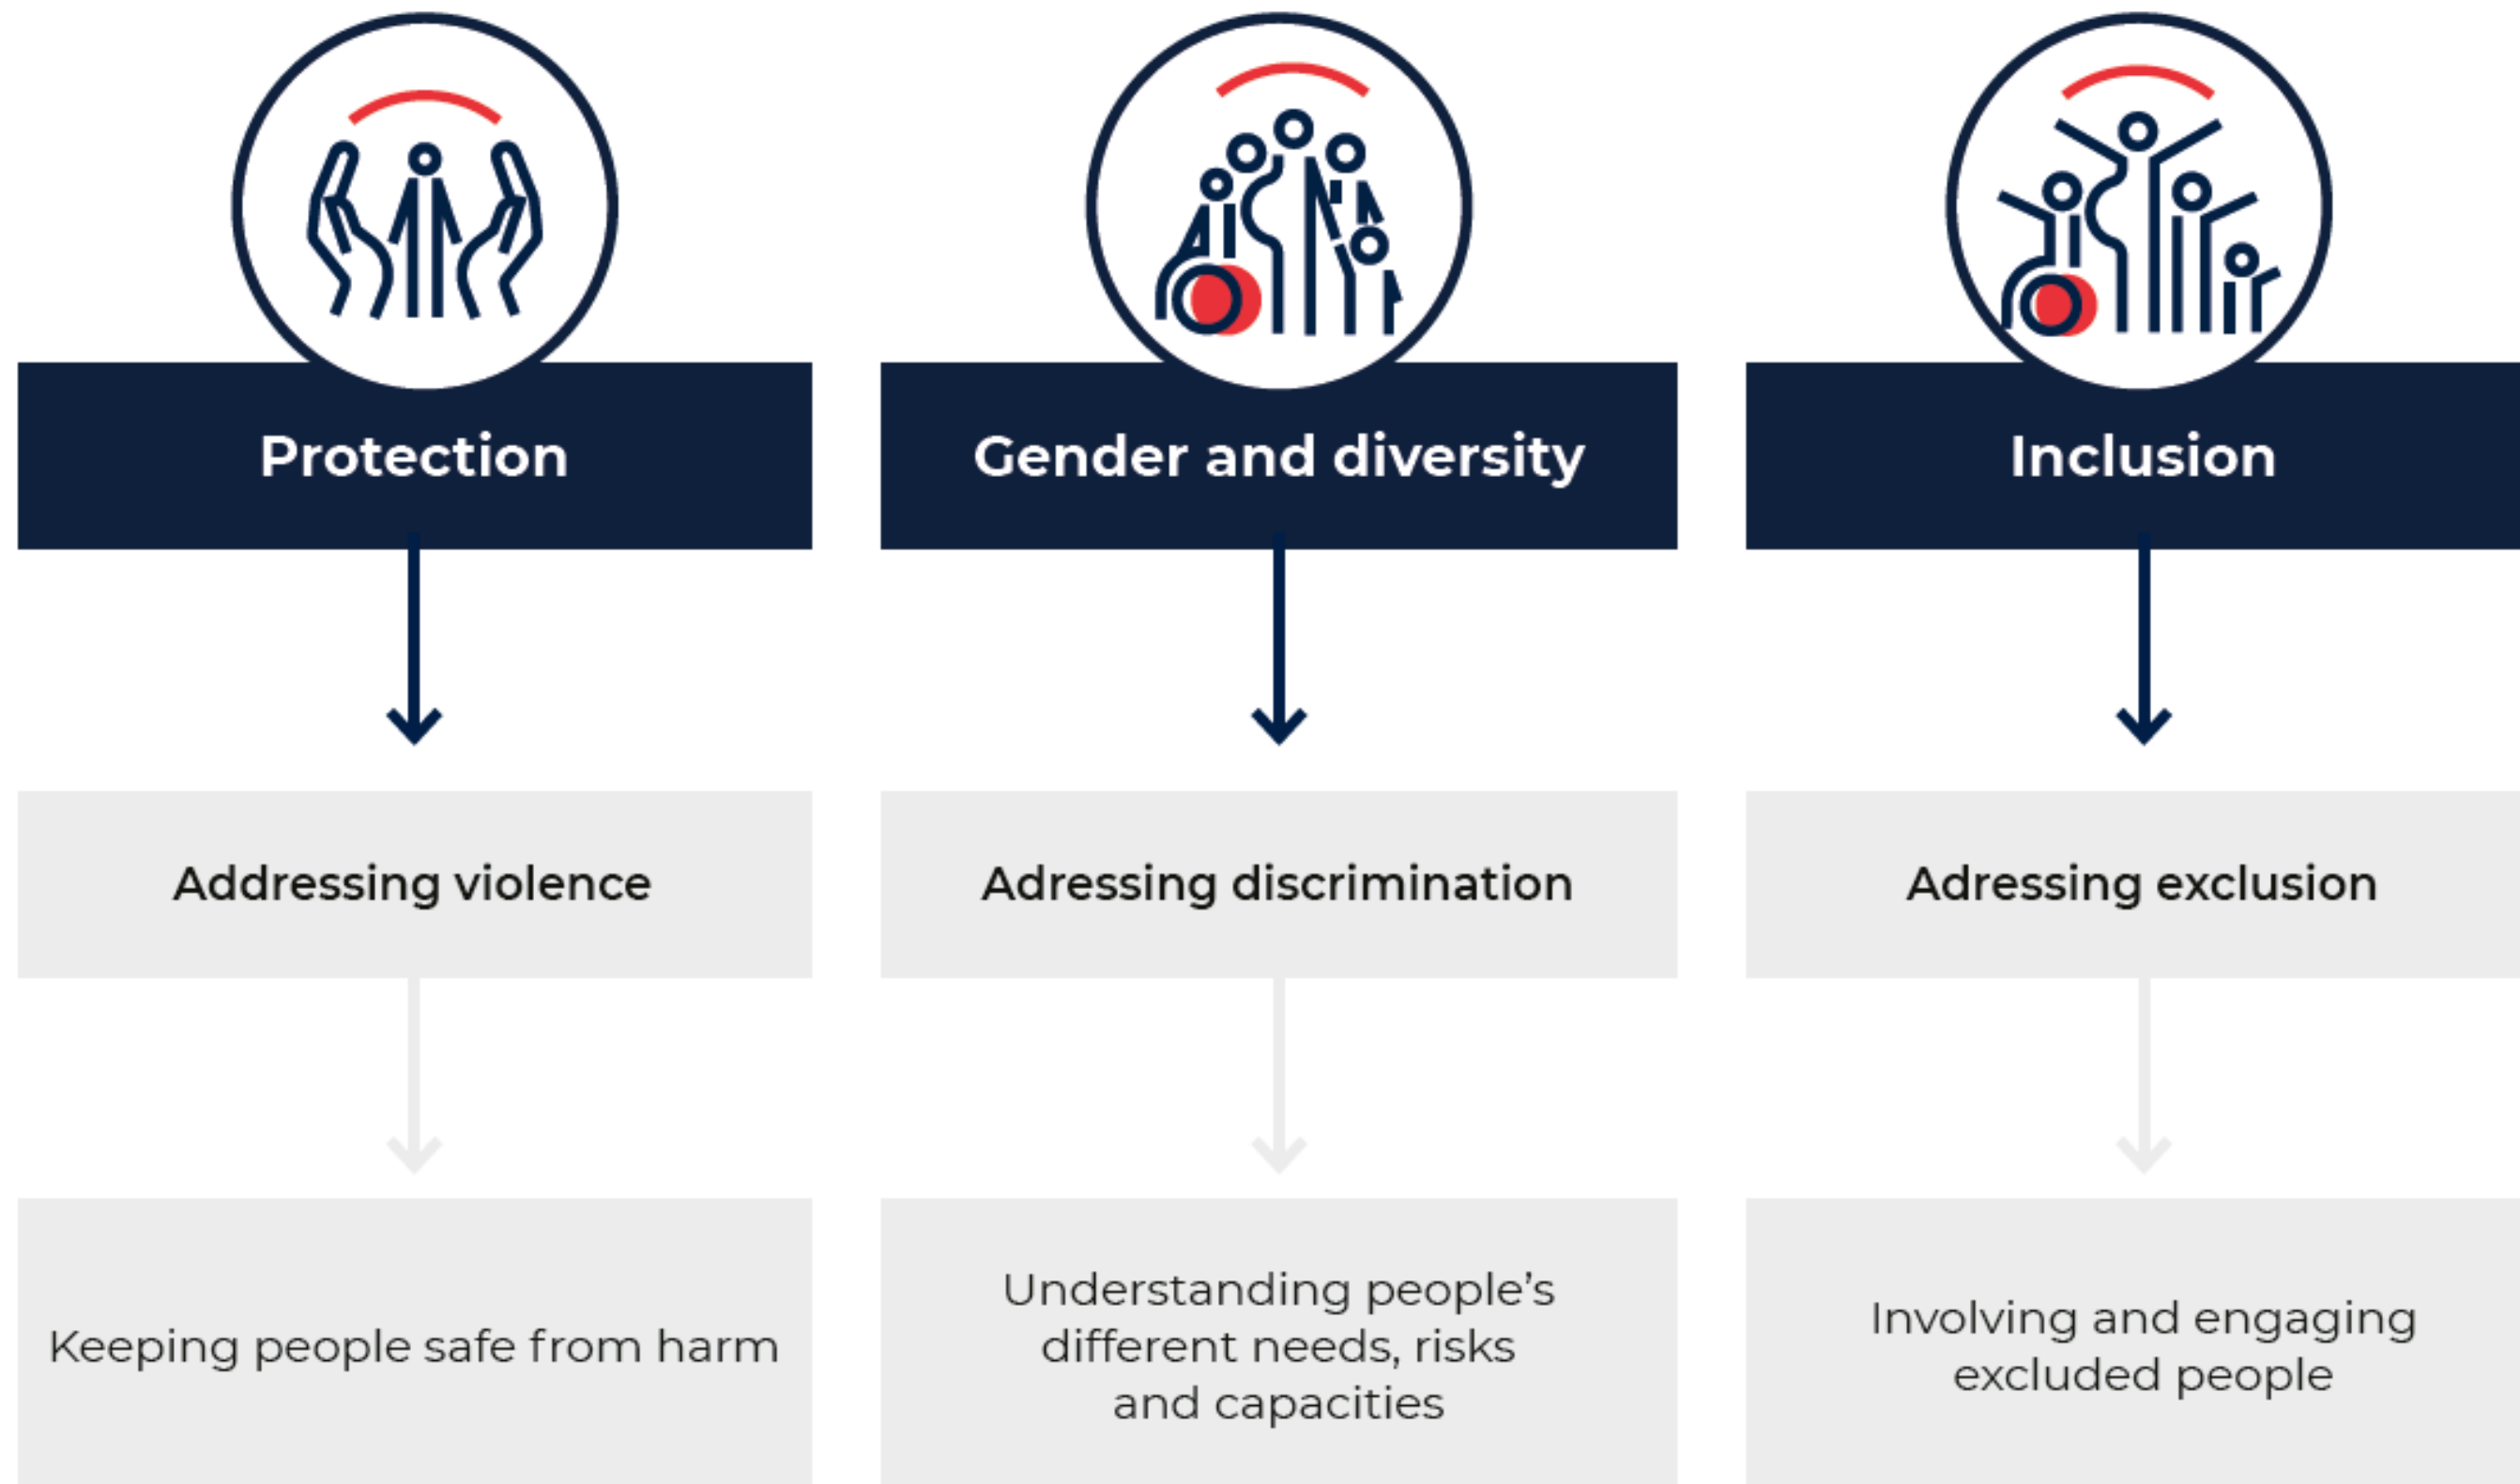

# One size does not fit all

- Age
- Gender
- Disability
- Ethnic origin
- Social background
- Religious beliefs
- Language
- Etc...

People have different needs, capacities, vulnerabilities, coping strategies and interests. Emergencies make existing gender inequalities more prominent and the incidence of sexual and gender-based violence often increases.

# What is PGI?

# What is PGI? Gender

Sex	Gender
Biological differences	Social differences
Male, female	Masculine, feminine
Born male or female; difficult to change	We become masculine or feminine. Changes across the life-cycle, within and between cultures, traditions and beliefs
Binary opposites	Degrees of masculinity and femininity – society sets the bar on attitudes, behaviours etc.

# What is PGI? Gender

Females can  
get pregnant

Women tend  
to do more  
housework,  
including  
fetching water

Some women  
are restricted  
from leaving  
their homes  
during the day

Females  
breastfeed

In some  
countries,  
some women  
have to cover  
their heads  
when they go  
outside the  
house

Females have a  
monthly  
menstrual cycle

Males have  
deeper voices  
after puberty

Women are the  
main care-  
givers (for  
children, aging  
parents, sick  
and disabled)

# What is PGI? Diversity

The full range of different social backgrounds and identities that make up populations.

The **respect** and **acceptance** of the differences between people.

# What is PGI? Inclusion

- Analyzing how people are excluded and use that knowledge to actively reduce exclusion.
- Providing inclusive services means giving equitable access to resources for all.
- Inclusion is making sure the most vulnerable groups are included and nobody is left out in any stage of the process.
- In the longer term, social inclusion also focuses on facilitating access to opportunities and rights for all by addressing, reducing and ending exclusion, stigma and discrimination.

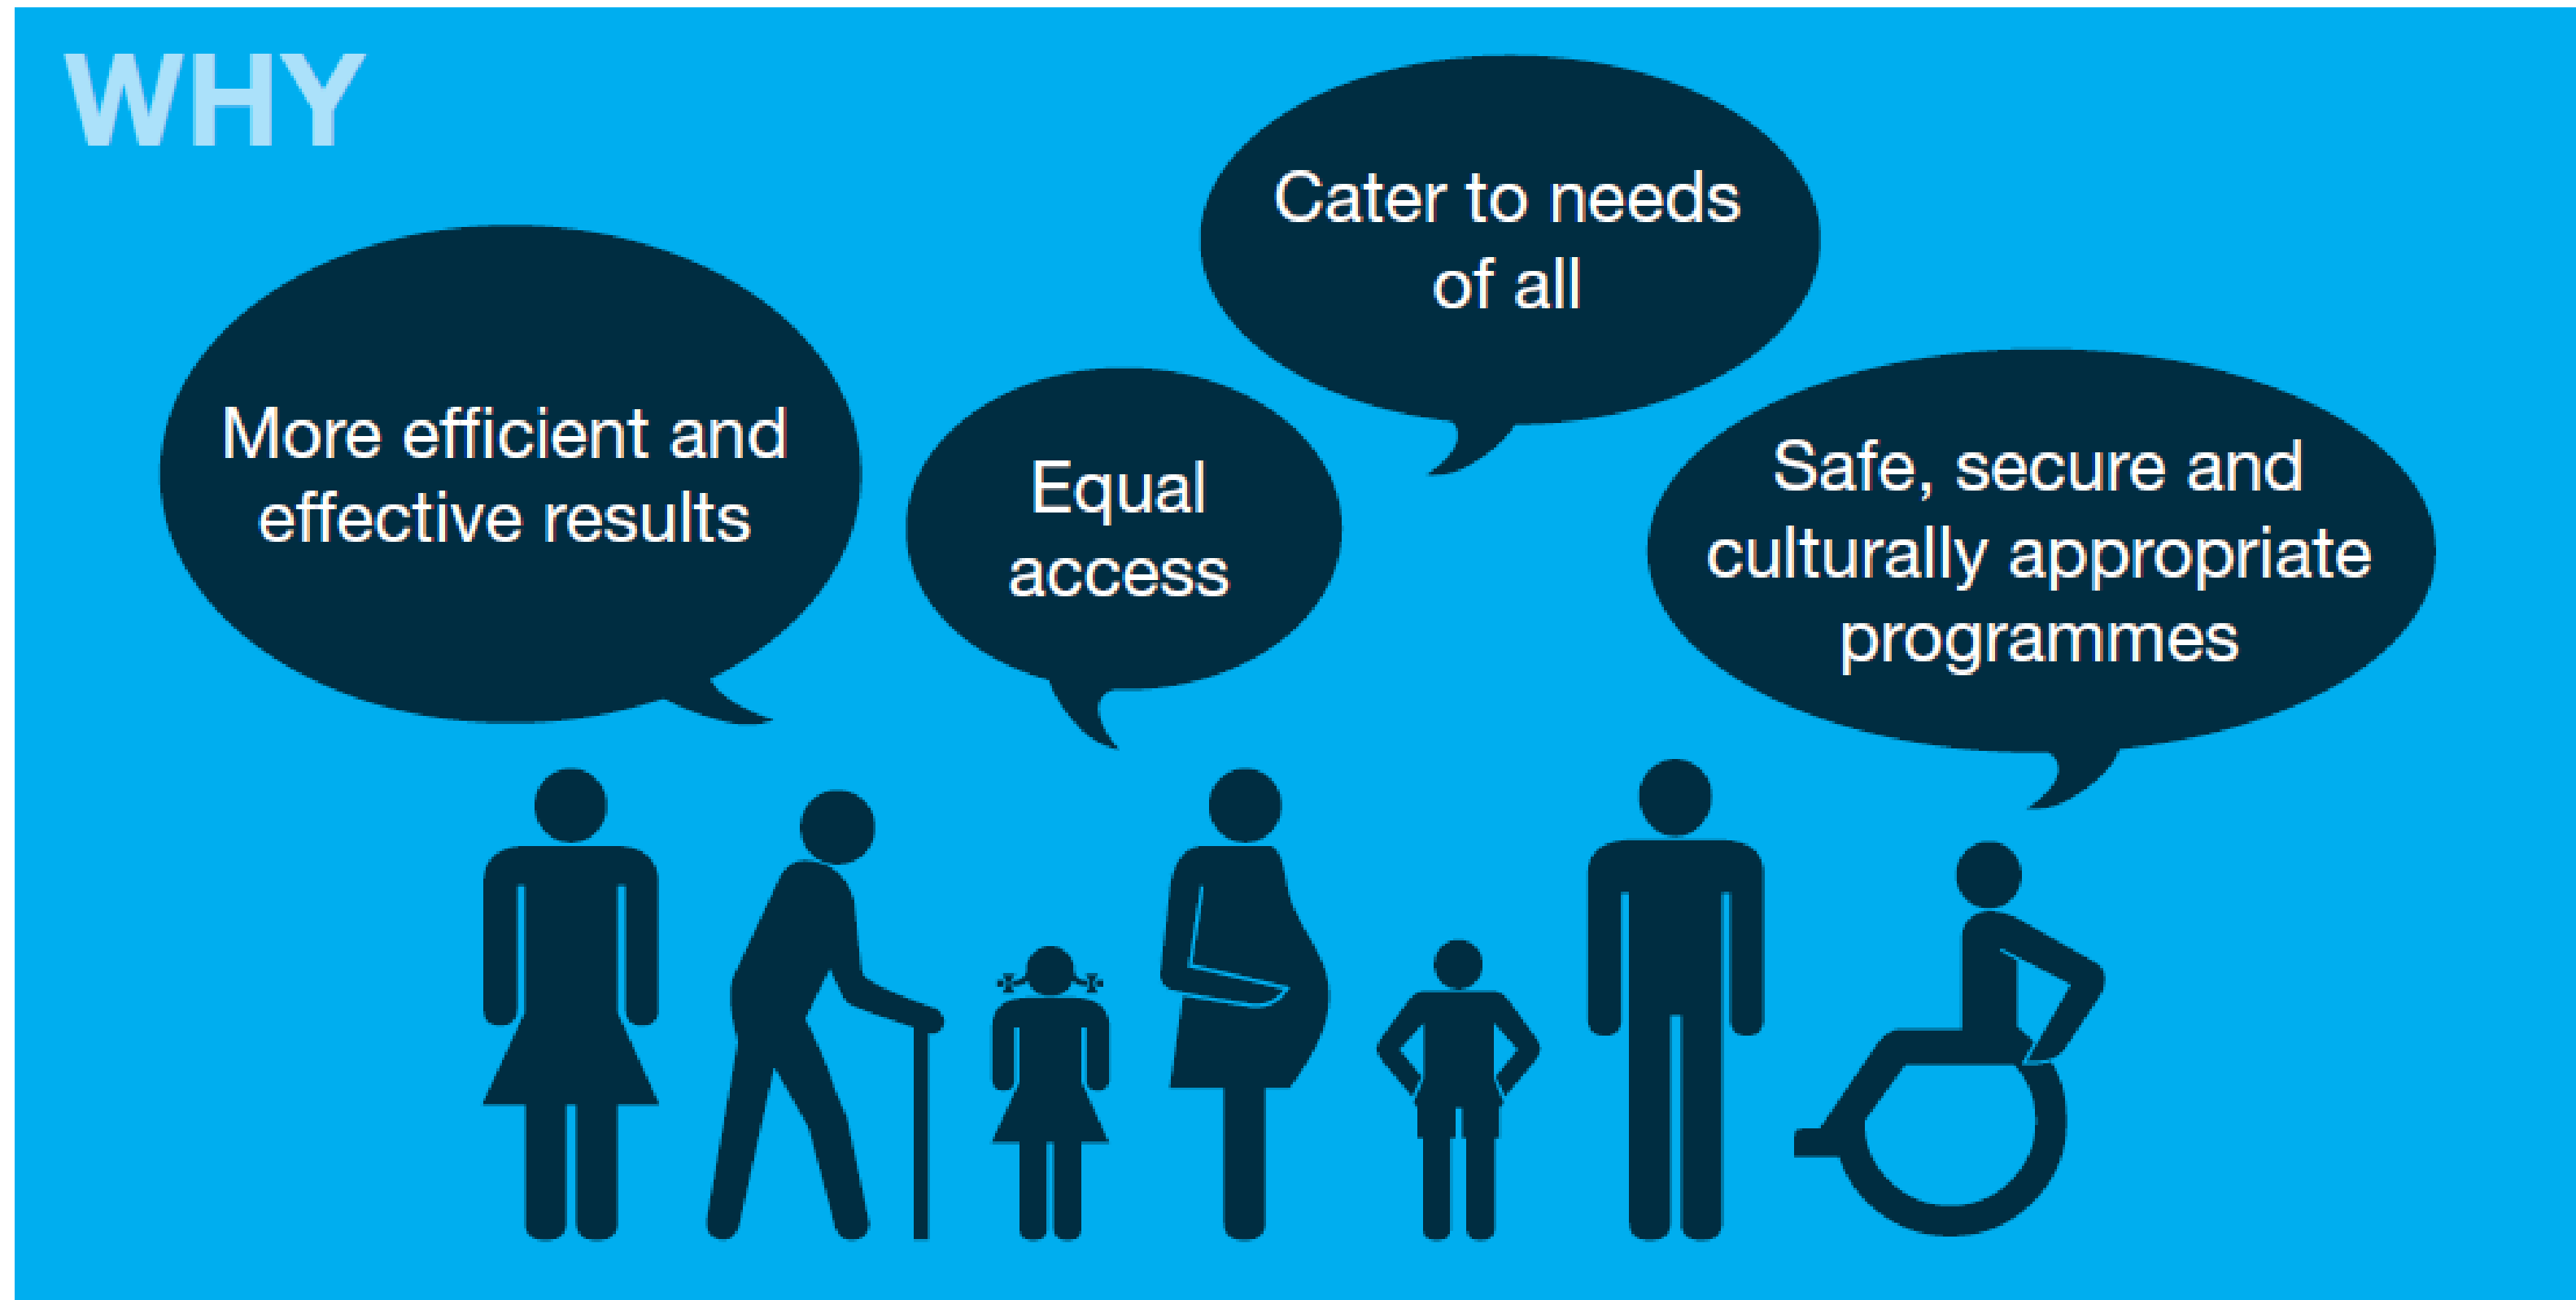

# Why is this important?

- No-one left behind
- No-one left unsafe
- No-one left out

Source: IRC UK

# Why is this important?

# What does it mean? DAPS

Dignity

Everyone has access to water and sanitation facilities and the items they need to be able to manage their **personal and household WASH needs** in a way they want to, in accordance with **their cultural** context, and which supports their feelings of **confidence, wellbeing and self-esteem**. Adequate water and private facilities for personal hygiene (including **menstrual hygiene and incontinence**) and **maintaining cleanliness** (including of children, persons with disabilities, older people and people with chronic illnesses) are vital for safeguarding the dignity of individuals.

Access

**WASH facilities**, services and **information** are designed and implemented in a way so that everyone can **use them, understand them and benefit from them**. Cultural stereotypes and norms around gender, age and disability affect **decision-making arrangements**, and access to power, resources, public participation and even to water itself, and need to be considered in all phases of WASH programmes.

# What does it mean? DAPS

## Participation

Everyone in a community – regardless of their gender, age, disability or background – has their voice heard and is actively **involved in decision-making for the selection, design**, construction and ongoing **operation and maintenance** of WASH facilities and services.

## Safety

Everyone **feels comfortable and safe** to use WASH facilities and services, and that their **design, location** and operation **minimizes risks of violence**. Vulnerability to violence is increased by a lack of safe and secure sanitation infrastructure, particularly in emergency contexts where there can be lack of privacy, overcrowding and lack of lighting in communal spaces and facilities.

# DAPS in practice – different barriers

# How?

1

Hire **diverse and balanced WASH teams**, with the right attitudes, skill-based training and commitment

2

Collect **data disaggregated by sex, age and disability** (at a minimum)

3

**Ensure all groups have meaningful participation in the decision-making process** for WASH infrastructure and activities (see page 10-14)

4

Continuously **analyse the specific needs**, preferences, capacities, barriers to access and safety risks related to WASH infrastructure and activities, for each group

5

**Revise and adjust activities**, focusing on “doing no harm” and leaving no-one behind

# How? Sex, Age and Disability Disaggregated data - SADD(D)

0-5		6-12		13-17		18-40		41-50		51-60		61+	
F	M	F	M	F	M	F	M	F	M	F	M	F	M
2	4	6	5	2	3	25	44	2	4	1	2	3	3
5	6	14	15	17	19	0	0	0	0	1	2	5	3

- Use sex- and age- disaggregated data as mandatory in all indicators, baselines, data collection, analysis, and reporting
- Where possible and necessary in a target area use disability disaggregated data as well as filtering by other components of diversity
- Allows us to understand the differences in level of participation, the benefits women and men receive from the programme and any gaps
- Disability needs to be disaggregated by function: **walking, seeing, hearing, cognition, self-care and communication**

# How?

## Discuss

- What gender and diversity sensitive activities are carried out in the video?
- In what way do these activities address the needs in terms of dignity, access, participation or safety?

# Community Engagement and Accountability

Community engagement and being accountable to communities is **not something new or separate** from WASH programming.

**Participatory approaches** and community engagement have been a large and fundamental part of WASH programmes.

If voice **everyone in a community** is heard and is actively involved, the impact on health, dignity and resilience are greater

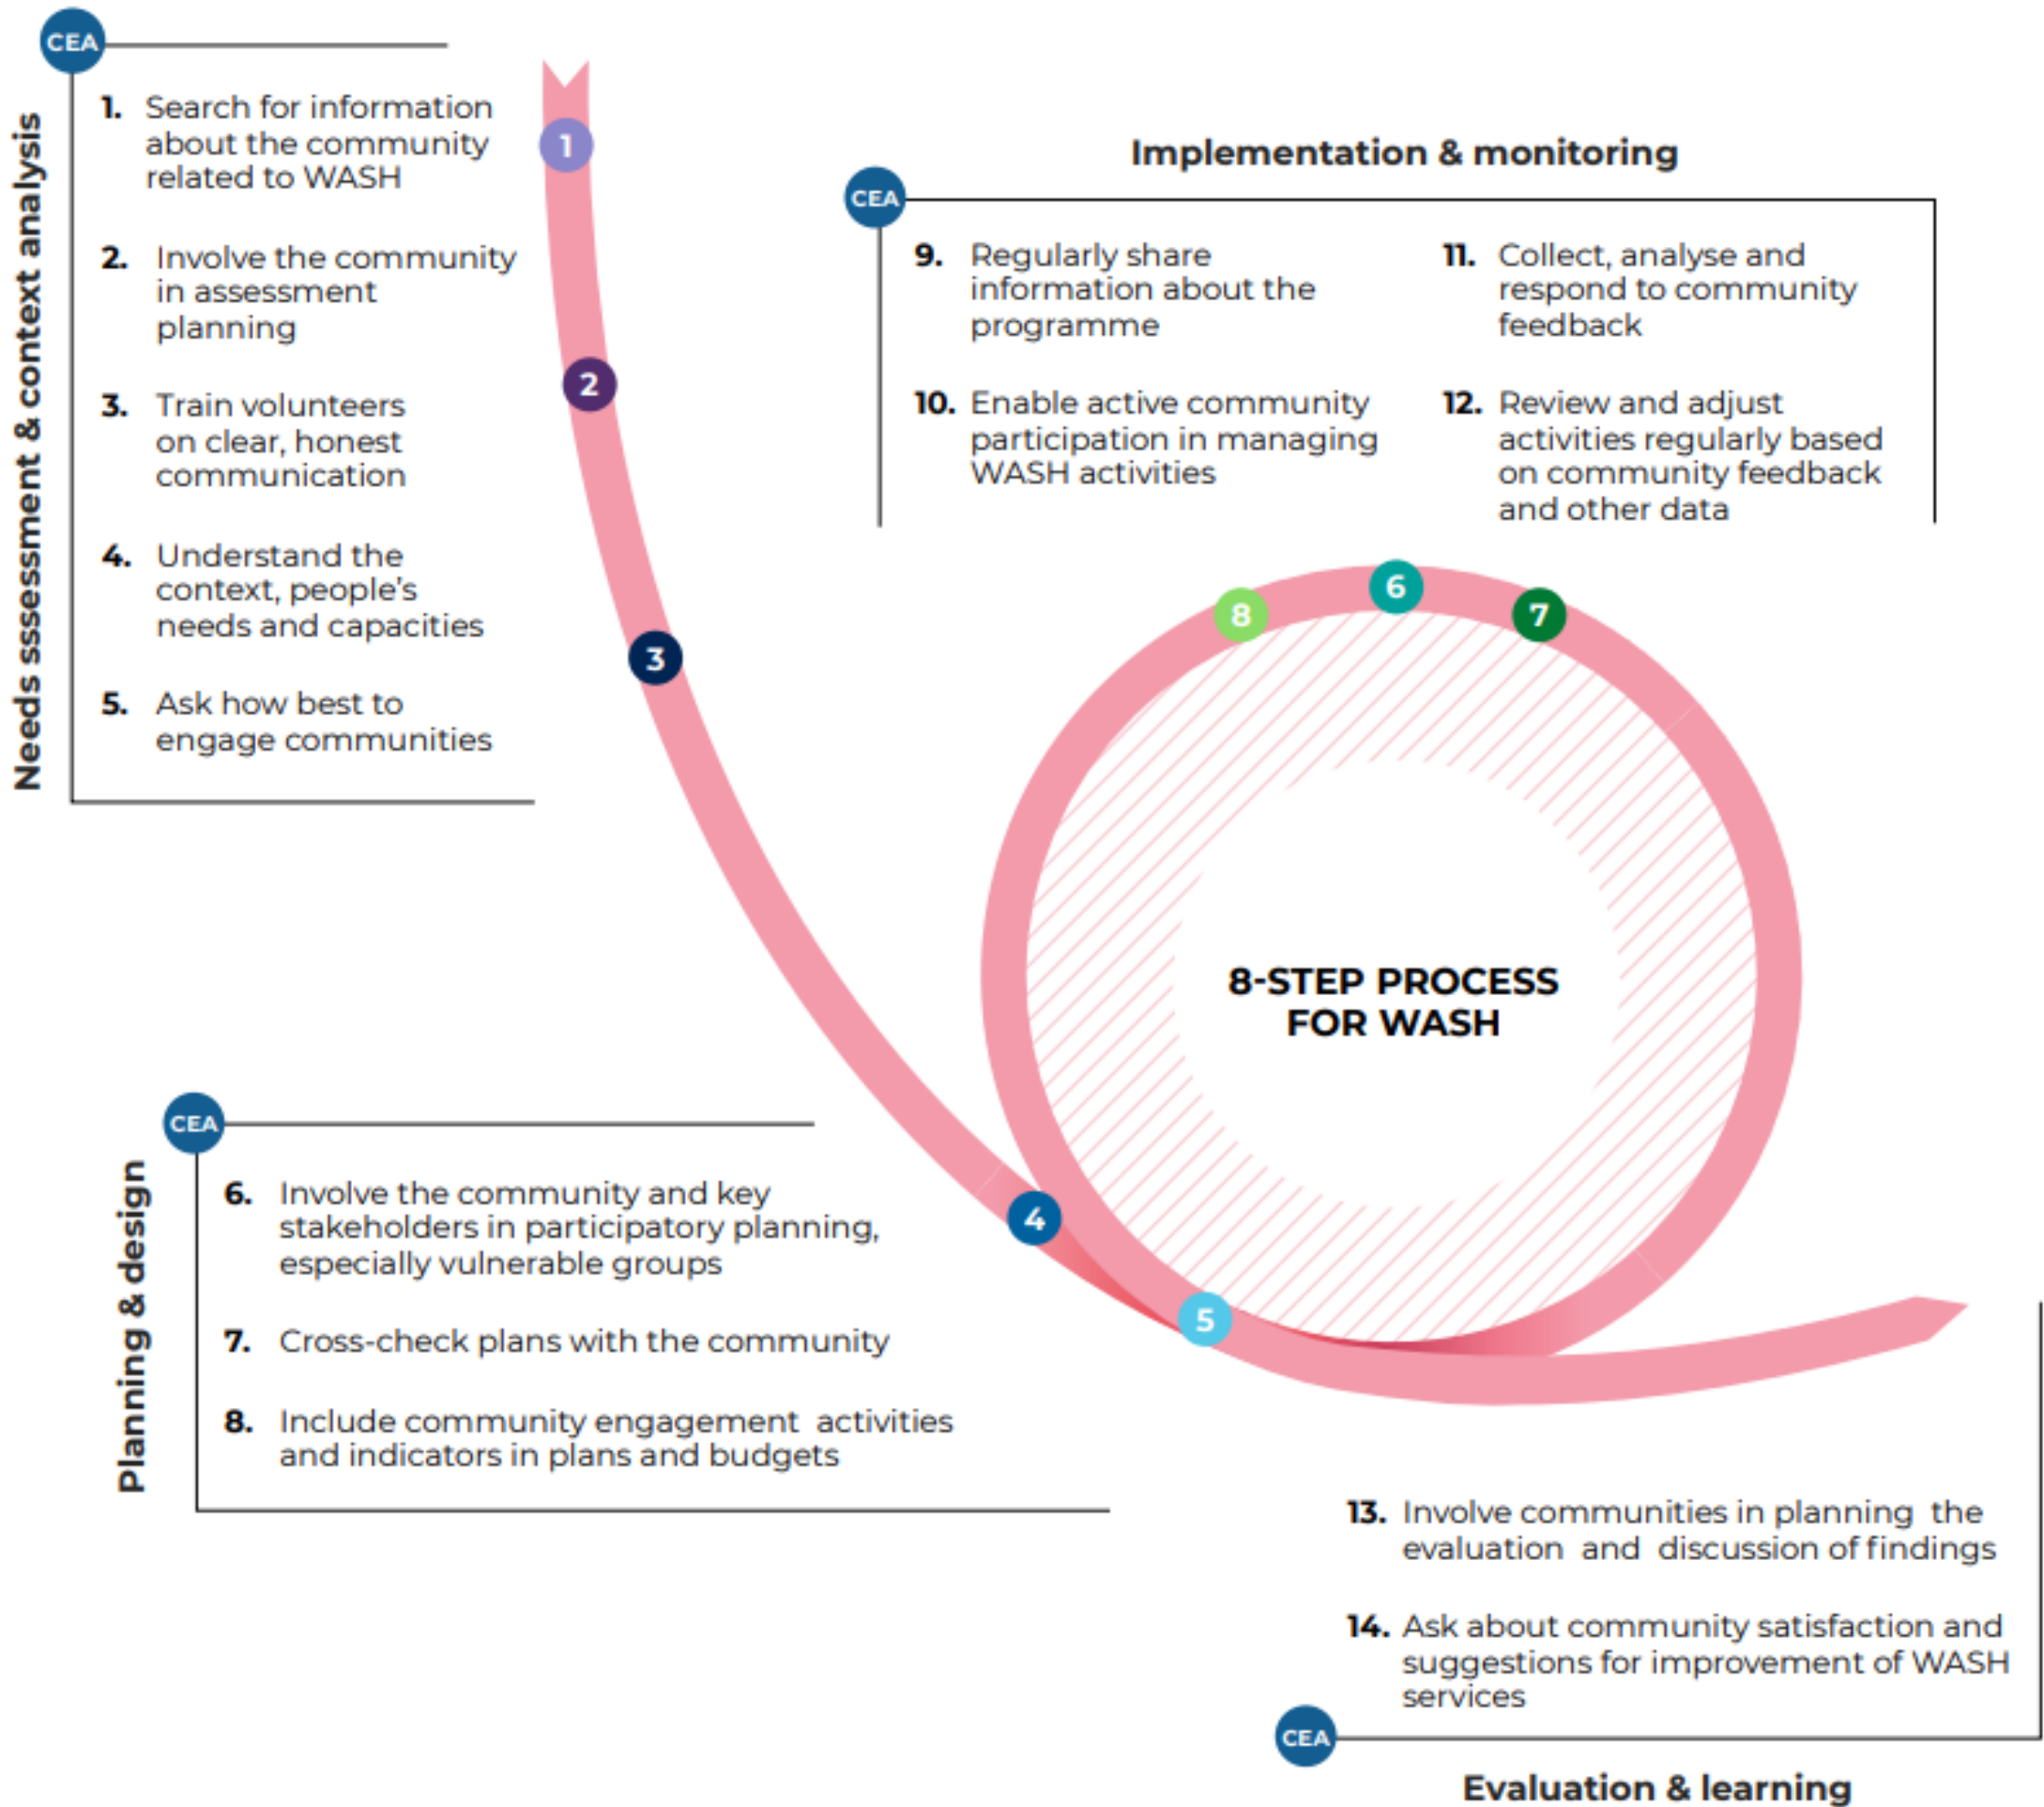

# How?

## Seven golden rules...

1. Ask about information needs and communication channels in assessments
2. Understand the context
3. Remember assessments are 2-way
4. Provide information as aid – saves lives and might be all some people receive
5. Involve communities in planning the response
6. Listen to AND act on feedback
7. Work with other agencies

14 key actions for achieving good community engagement in WASH

<b>Participation and feedback</b>	Open channels of communication such as community meetings, telephone lines or suggestion boxes.
<b>Information as aid</b>	Channels that can reach a lot of people quickly such as SMS, TV, social media or radio
<b>Behaviour and social change communication</b>	Channels that support two-way communication, in depth engagement and continuous dialogue, such as radio chat shows, mobile cinemas or community drama
<b>Evidence-based advocacy</b>	Good options include community meetings or conferences and workshops with stakeholders

# Why?

# Pictures

# Notes

## NOT SOMETHING NEW...

- the Movement has many examples of successfully working on PGI and CEA

## NOT ALWAYS A STAND-ALONE PROGRAMME...

- support programmes and operation to increase **reach, impact** and **accountability**
- it is everyone's responsibility
- It is rooted in its humanitarian mandate to **prevent and alleviate human suffering without discrimination** and to protect human dignity.
- The RCRC recognizes that women and men have different **capacities, strengths, needs and vulnerabilities** which can impact their resilience to disasters

# Thank you! Questions?
